xdruk.eu TECHNICAL SPECIFICATION

BUSINESS CARD 90 × 50 MM

- Prepare the design at **exactly 96 × 56 mm** (including bleed).
- If you order **4/4 print**: for tif files name the outer side **nazwapracy_awers** and the inner side **nazwapracy_rewers** (suffixes as in DP's template); for pdf prepare one double-sided document.
- Colour: **CMYK** (no embedded profile, or Coated Fogra 39). Otherwise the file is converted automatically to CMYK Coated Fogra 39, which may change the colours.
- Resolution: **300 dpi** or **600 dpi** (if the design has important fine details).
- File formats: **tif** (flattened to a single layer, LZW compression optional) or **pdf** (fonts converted to outlines).
- **Bleed:** a background reaching the trim line must run on smoothly all the way to the edge of the artwork.
- Do **NOT** add trim lines, template outlines, colour scales, colour bars and the like.
- Keep **ONLY THE ELEMENTS** to be printed in the file you send.
- Do **NOT** lock any elements or layers and leave no special effects in the design: flatten all such elements to a 300 dpi CMYK bitmap.
- **Check** before sending that there are no typos and that texts, data and so on are correct.
